

# JAN MORAN

TELECOM & COMPUTER ENGINEER | ENTREPRENEUR

Dual-degree engineer driven by the philosophy of empirical learning and proactive problem-solving. I transform high-level engineering concepts into tangible products that solve real-world challenges.

## Education

### Telecommunications Engineer

Universitat Autònoma de Barcelona  
2021 – 2026

### Computer Engineer

Universitat Autònoma de Barcelona  
2021 – 2026

## Languages

Català (Nadiu)

English (C1 Advanced – 2021)

Español (Nativo)

Deutsch (A1.2)

## Activities & programs

iFest (2025 edition)

HACK EPS Lleida (2025 edition)

Innovation Day (2024 edition)

HACK UPC (Editions: 22'/23'/24'/25'/26')

AESSBot UPC (2026 edition)

UAB the HACK (Editions: 24'/25')

NASA Space Apps (2022 edition)

HP CODEWARS (2019 edition)

## Experience

### CoCreator – BitSpace: Digital Health

BitSpace is an entrepreneurial project I've been developing with 2 other partners. Working on it has helped me understand how the business mind works and the first steps on creating your own startup.

### Engineer Intern – Institut d'Estudis Espacials de Catalunya

Rotatory antennas, embedded systems, SDRs, signal processing and even web development. Really, there is nothing "telecom like" I didn't do.

### Web developer – Institut d'Estudis Espacials de Catalunya

Using Vue, I have developed a webpage capable of receiving GNSS signals via SDRs (Software Defined Radios) and displaying data from their processing.

### Python/IA developer – Computer Vision Center

I have completed an internship at the Computer Vision Center, where I participated in a project involving the segmentation of clouds in satellite images using artificial intelligence.

## Technical capabilities

### Advanced basis on:

GNU Linux • Git/GitHub • WEB and APP development • C/C++ • Python • Arduino • Pitching

### Have enjoyed working with:

Matlab • Signal processing • Tensorflow (python) • PCB Fabrication process and soldering • Embedded systems • Transmission line theory • Ethical hacking

## Some pet projects

### Rotatory antenna system | Embedded, satellite tech

I developed a modular rotatory structure and programmed it for the tracking of LEO satellites with highly directive antennas.

### PCB soldering kits & arduino projects | Electronics, Arduino

Buying soldering kits for beginners and playing with Arduino projects has been my hobby for quite a while now.

You can find these projects and many more on my GitHub page.
